

Fagus Grandifolia

American Beech

Native

F

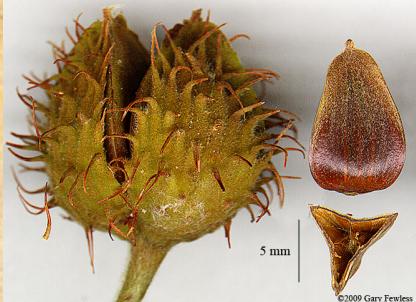

Fagus Grandifolia is a native forest tree often seen on western slopes with oaks.

It prefers dry, acidic, soil and is salt tolerant. *Fagus Grandifolia* cannot take soil compaction

Landscape Notes: can be used as a hedge when planted 12" to 14" on center.
Thin skin requires a mulch ring 1"-2" deep

Leaves: Alternate, sharp single serrated margins, pinnate veination

Beech nut prickly and typically 2 seeded

Buds: long pointed and imbricate scales

Bark
