

# ***Acer saccharinum***

## **Silver Maple**

Native

**A**

Form - 50' to 80', tall with a rounded, open, spreading crown.

Notes: Acer saccharinum is native to the lowlands and thrives with a lot of moisture. They are weak limbed and need regular pruning and cabling.

**Native**

Leaves - Acer saccharinum leaves are distinctly 5 lobed and silvery underneath. The lobes are deep and the leaves have an almost lacy appearance.

Buds - Reddish-brown with large scales, dense clusters.

Flowers - Greenish to reddish flowers in dense cluster, long before the leaves.

Bark - The bark is silverish in color and slightly orangeish in the cracks.
